1. Executive Summary

This technical document was developed with the intention of presenting our project to the community, as well as to participants or those interested in understanding more about the Pump Coin project.

The information presented below has the sole purpose of providing information to potential investors and future contractors of our services and, thus, determining whether they are willing to verify the company with the intention of buying and participating in the assets related to the Pump projects, also o Possibility of owning an asset that can achieve an appreciation.

First, we want to make it clear that this document is not written accordingly, nor subject to any law or regulation of any jurisdiction that aims to protect investors.

The content of this document can be translated into other languages, even used to define verbal communication channels, or written with potential partners, or project collaborators. As a result of the translation, some of the information contained in this document may be omitted, corrupted or falsified. In the event of inconsistencies between any translation or communication, the official English Whitepaper will prevail over the dissipation as an original document.

Pump Coin reserves the right to make changes in the future WhitePaper * Updated versions of the document, will remain published at <http://pumpcoin.tech>, and all previously published versions will be considered invalid in all its intentions and representations.

2. Introduction

In the history of cryptocurrencies, from the existence of Bitcoin until today the only event that makes the investor explode with emotion are the "PUMPS". When thinking about it, our team came up with the idea to create Pump Coin, a currency to sponsor hundreds of Pumps groups around the world.

In addition, Pump Coin is a currency geared towards global investors who like to value their assets frequently. For the first time in the history of cryptocurrencies we have a currency that will be organized in the world so that everyone can buy together at the exact moment that the signal is given in the main group.

We count on you in this project, come surf the waves of Pump!

2.1 Cryptocurrency Project

➤ What is PUMPCOIN?

PUMPCOIN was born as a growth-oriented cryptocurrency, which is based on the complete drive of this and other blockchain projects, supported by the PUMP team, under the payment of our own currency.

➤ Our Blockchain

PUMP is (100%) open source, with mining and PoS (Proof of Stake) based on the Script algorithm with a supply limit of 350 million coins. Our Proof of Stake structure is implemented in favor of our nature, we want to be friendly with it, while offering our community another healthy way to invest, taking advantage of this to strengthen the project and receive more people.

The usefulness of the project is based on being the basis of a team to drive growth not only in our project, but also through the movement of the other Pump coin partner groups.

3. Pump Coin Utilities

PUMP COIN! That name alone gives ideas and imaginations in the minds of readers / investors. So let's go to the details of PUMP COIN Utilities:

3.1 - Global Pump Groups

We know that there are currently thousands of Pumps groups around the world, on social networks, mainly on Telegram and Discord. With this in mind, our team will seek to partner with several Pumps and Signals groups, mainly in exchanges with higher volumes or active users, such as the large Binance or small ones, but known as, for example, Crex24. In addition, our main objective will be to find partners who receive the Pump coin as a monthly fee for participants in their specific groups. This will be one of our main focuses, as the monthly rate is a continuous liquidity tool, causing BOMBA's currency to be constantly moved in exchanges.

3.2 - Participatory Airdrops

The main idea is that the Pumps in the Partner groups are profitable in Pumpcoin, so that everyone who participates in the Pumps using above a value agreed by the groups' adms, will earn a certain value of Pumpcoin. If the deal was to enter 0.1 BTC per participant of that specific Pump, everyone who entered with 0.1 BTC will receive a certain bonus Pumpcoin value. This will make global Pumps increasingly voluminous and impactful. For each person who meets the satoshis goal, will be satisfied with the prize received in Pumpcoin (this includes a value already involved in the partnership with the ADM of that specific group).

3.3 - Airdrops Exclusives

Pumpcoin will provide an exclusive Group of signals and Pumps as well, and in this exclusive group, our rewards will be the best of all. In other words, participate in our Pumps and be a monthly subscriber to our signals and you will always have an extraordinary reward in Pumpcoin.

3.4 - Monthly fees Binance Signals

In the group mentioned above, we will work with monthly traders who will pay their monthly fees in Pumpcoin. You will receive up to 5 signals daily to be a successful trader through our quality signals.

3.5 - EXCLUSIVE PUMP SIGNS PUMPCOIN

You may be wondering if it is the same as the topic above, but this one speaks exclusively of Pumps just for our community, on several exchanges (including Crex), not forgetting that it will include the most anticipated, the famous quarterly Pumps in Pumpcoin that will be the eternal mark to honor the chosen name that has.

4. Specifications

- ✓ **Official Name:** Pump Coin
- ✓ **Ticker:** PUMP

5. Mobile wallet

A mobile digital wallet is a program used to send and receive Bitcoin or other cryptocurrencies, in addition to also checking and tracking the balance. The function of a wallet is to store public and private keys and interact with the blockchain.

A mobile wallet is a program that runs in the format of an application for a smartphone or tablet. It is very practical to make payments on a daily basis. However, it is important to note that if the user does not make a backup of this wallet, he is at risk of losing access to funds in case of loss of the cell phone or tablet.

The intention to put this information in our Whitepaper, brings the importance of showing something that many people forget to use, because, currently, we observe that most investors in Cryptocurrencies are overconfident in leaving their assets in exchange.

We strongly recommend not to leave Pumpcoin in the Exchanges, just in case of sending for sale at the same time.

Carefully remembering that exchange is not a wallet. She looks like she has a wallet, but it's not her wallet.

So we ended this topic by reinforcing. Use Pumpcoin's exclusive wallets (mobile and computer). Only then will your coins be 100% safe.
